SUMMARY

Lead Automation Engineer with 10+ years of experience designing, implementing, and leading QA automation across Web, API, Mobile, and Cloud-native platforms. Proven expertise in building scalable frameworks using Playwright, Cypress, WebdriverIO, Selenium, RestAssured, Appium, Pytest, and JavaScript/Java/Python. Skilled in performance testing (Artillery, JMeter), observability (Splunk, Datadog, ReportPortal), and CI/CD integration (Jenkins, GitLab, GitHub Actions).

Experienced in defining test strategy, test pyramid alignment, and WBS, while mentoring QA engineers, leading module-level QA ownership, and coordinating with offshore/vendor teams to ensure high-quality delivery. Hands-on with GenAI/LLM testing — validated RAG-based chat applications using LangChain, RAGAS, and OpenAI APIs, focusing on prompt evaluation, hallucination mitigation, and response accuracy. Recognized for technical leadership, mentoring, vendor collaboration, and interview contributions, with multiple awards for delivery excellence and knowledge sharing.

SKILLS

Programming & Scripting:	Python, JavaScript, TypeScript, Java
Automation & Testing Tools:	Playwright, Cypress, Selenium WebDriver, WebdriverIO, RestAssured, Postman, Supertest, Appium, Pytest, Mocha, Jest, Cucumber, Serenity, TestNG, K6, Artillery, Sikuli, Appium (iOS/Android), Xcode
DevOps & CI/CD:	Git, GitHub Actions, GitLab CI/CD, Jenkins, Docker, Kubernetes, Maven, AWS (S3, Lambda, EC2, DynamoDB), GCP, Kafka, Splunk, Datadog, New Relic, ReportPortal
Databases:	MySQL, PostgreSQL, MongoDB
AI/ML & Web3:	Code Agents (MCP, GitHub Copilot, Claude Code, auggie CLI), LangChain, RAGAS, OpenAI API, Hugging Face, scikit-learn, pandas, NumPy, Retrieval-Augmented Generation (RAG), Solidity, Hardhat, Ethereum fundamentals, Smart Contract Testing, Wallet Flows
Test Management & Other:	JIRA, TestRail, Zephyr, HP-ALM, Apache POI, Agile/Scrum practices

PROFESSIONAL EXPERIENCE

Cyncly

October 2021 – Present

Lead SDET

Project: Cyncly – Next Make ERP Platform

ERP platform supporting the window, door, and glass industry, enabling business operations across design, manufacturing, and delivery workflows. The platform supports application-based operations with integrated business processes and release-driven delivery cycles.

- Acting as the primary Lead QA supporting two development teams across application testing activities.
- Built AI-assisted QA workflows using MCP integrations, reusable AI commands, and specialized agents to accelerate requirement analysis, test generation, debugging, and automation development.
- Managing testing lifecycle from requirement analysis through release readiness and validation.
- Performing functional, integration, regression, and end-to-end testing across UI and API workflows.
- Developing and maintaining frontend automation using Cypress + TypeScript.
- Performing backend/API validation using SoapUI.
- Supporting CI execution and release validation through Azure DevOps pipelines.

- Driving defect lifecycle management including reporting, validation, and closure coordination.

Cox Automotive

Oct 2021 – Present

Lead QA Consultant / Automation Architect

Project: Cox Automotive – Dealer Retailing Platform (DRiP)

CA digital retail platform for automotive dealers, enabling management of inventory, pricing, and retail processes in one place with seamless online-to-offline vehicle lifecycle experiences.

- Owned end-to-end test automation using Python + Playwright for UI and Pytest + requests for backend workflows across microservices.
- Ensured adherence to the testing pyramid, collaborating with developers to maintain the right balance of unit, integration, and E2E coverage, while focusing QA efforts on high-value E2E tests.
- Built robust regression suites integrated into GitHub Actions pipelines, enabling nightly execution with automated reporting in ReportPortal.
- Coordinated deliverables with offshore and external vendor teams, ensuring alignment on test strategy, quality expectations, and timelines across distributed groups.
- Contributed to manual exploratory testing and used Rally for requirement traceability, test management, and defect tracking.
- Collaborated with dev teams using Splunk and New Relic dashboards for root-cause analysis and observability.
- Provided guidance to QA engineers (5) on test strategy, automation design, and best practices, supporting team-wide quality ownership and continuous improvement.
- Leveraged GitHub Copilot to accelerate automation development and improve test artifact quality.

Project: GreenSky – Loan Origination & Servicing Platform

A digital lending platform enabling loan applications, servicing, and partner integrations for financial institutions supporting high transaction volumes across web, API, and performance layers.

- Automated UI workflows with WebdriverIO (TypeScript), Mobile (Appium) and API tests with Axios + Mocha/Chai, ensuring coverage of core lending scenarios.
- Migrated framework from WebdriverIO to Playwright (TypeScript), improving stability, maintainability, and execution speed.
- Conducted performance testing with Artillery, validating high-volume loan transaction loads.
- Set up GitLab CI/CD pipelines and used Splunk & Datadog for faster defect triage and observability.
- Defined QA deliverables through a Work Breakdown Structure (WBS), improving planning and traceability.
- Mentored QA engineers (4) and contributed to interviews and team growth, driving adoption of best practices.

Publicis Sapient

Jun 2019 – Sep 2021

Senior Associate QA

Project: Plan Viewer

Plan Viewer provides its members a one-stop solution to view investments, track fund performance, change existing allocations, and project retirement pot growth over time.

- Automated frontend regression using Cypress (JavaScript), achieving ~70% coverage for UI workflows.
- Built backend API test suites with Supertest + Mocha/Chai, ensuring stability and correctness of REST endpoints.
- Integrated automated suites into Jenkins CI/CD pipelines, enabling smoke and regression runs for every build.
- Designed and managed test cases in Zephyr (JIRA), improving traceability between requirements, tests, and defects.
- Collaborated with product owners to define acceptance criteria and test scope, reducing defect leakage into UAT by 25%.
- Partnered with dev teams in Agile ceremonies (sprint planning, retrospectives), contributing to faster feedback loops.

RSK Business Solutions

Feb 2018 – May 2019

Senior Software QA

Project: Vistra Portal

A secure web platform enabling clients to set up new companies or acquire existing ones across multiple jurisdictions, maintaining records and streamlining legal document workflows.

- Built and maintained automation using Java + Serenity BDD for web workflows and RestAssured for API testing.
- Automated mobile scenarios with Appium (Android/iOS), increasing test coverage of business-critical features.
- Collaborated with external implementation and support partners, coordinating test deliverables and ensuring smooth integration across vendor and internal teams.
- Managed requirements and test cases in TestRail, ensuring traceability and reporting.
- Integrated suites into Jenkins pipelines, enabling consistent smoke and regression runs.
- Provided guidance to junior QA members (4) on test case creation, automation approach, and defect analysis, helping improve overall test quality.

Cognizant Technology Solutions

Jun 2014 – Jan 2018

Programmer Analyst

Project: CitiDirect

A secure single-window portal for Citi's customers worldwide, providing authentication, authorization, audit, and enterprise services for multiple Citi applications.

- Automated core workflows using an in-house Selenium + TestNG + Log4j framework, improving regression efficiency.
- Designed and managed test cases in HP ALM, ensuring traceability between requirements, tests, and defects.
- Performed smoke, regression, and production validation cycles across online banking and payment workflows.
- Collaborated with developers and BAs to detect defects early, reducing UAT defect leakage.

PROJECTS & POCS

Project: Healthcare Claims Management Platform

Web-based healthcare application used by medical billers and claim processors to create, validate, submit, and track insurance claims across multiple payer systems.

- Designed and developed a Playwright + TypeScript automation framework from scratch for end-to-end validation of healthcare claims workflows.
- Architected a modular automation solution using Page Object Model, fixtures, utility layers, configuration management, and reusable business components.
- Leveraged Claude Code to accelerate framework development while maintaining engineering standards and framework consistency.
- Implemented Playwright MCP integration with Planner, Generator, and Healer agents to support AI-assisted test generation and automated maintenance workflows.
- Automated critical healthcare scenarios: patient creation & management, claim submission, insurance eligibility verification, claim status tracking, billing workflows, error handling & resubmission.
- Developed GitHub Actions pipelines with Pull Request validation, manual workflow dispatch, and scheduled regression execution.
- Integrated automated reporting and execution notifications through Slack and Microsoft Teams channels.
- Enabled parallel execution, retries, screenshots, videos, traces, and detailed HTML reporting for improved debugging and faster root cause analysis.
- Established framework standards, code review guidelines, and onboarding documentation for future automation adoption.

Project: Internal RAG-based Chatbot (Policy Q&A Assistant) – LangChain, OpenAI APIs, RAGAS

A knowledge assistant built using LangChain and OpenAI APIs to help employees query company policies.

- Tested chatbot workflows using Pytest + RAGAS with metrics (context recall, precision, factual accuracy, relevancy).

- Validated multi-turn chat history and visualized results in RAGAS Cloud.

Project: Workflow Automation with n8n – n8n, Google Forms, Gmail API

Intelligent candidate intake pipeline automating application ingestion and category classification.

- Automated walk-in interview candidate intake by moving Google Form submissions into technology-specific categories.
- Built flows for data routing, notifications, and reporting, reducing manual effort and response time.

EDUCATION

Dehradun Institute of Technology — Bachelor's Degree in Engineering (2009 – 2013)

AWARDS

- **Delivery Excellence Award** – Multiple recognitions across 2023–2025 for outstanding project performance.
- **Knowledge Sharing Award** – For contributions to team learning and technical mentorship.
- **Technical Interview Contributor Award** – Recognized for active involvement in hiring and interview panels.
- **Pillar of the Month Award** – Honored for consistent contributions at prior organizations.

CERTIFICATIONS

- **ISTQB Foundation Level Certified**
- **Google Associate Cloud Engineer (GCP)**
- **AWS Solutions Architect – Associate**
